

Wikispaces and ePortfolios

You hear a lot of buzz about eportfolios — and there's a reason. When you understand what eportfolios can do for your students, and what Wikispaces can do for eportfolios, Wikispaces Private Label is the clear choice.

What you can do with eportfolios

Nurture student engagement

By providing a place to collect all kinds of work, from essays to video projects — and then share the work they're proud of with the whole world — eportfolios get students excited. In fact, **70%** of students would rather work on electronic portfolios than traditional paper portfolios.*

Simplify accountability reporting

With eportfolios, all kinds of reviewers — parents, teachers, and administrators — can watch and evaluate student work not only once it's complete, but also as a **work in progress**.

Develop needed technology skills

In school, and in life, your students will be increasingly reliant on collaborative and web tools. A paper portfolio might help them cover content basics, but eportfolios help them **acquire technology skills** while they work.

Give graduating students an edge

Through connective links and reflective text, eportfolios let students show prospective colleges that they have a **deeper understanding** of their work. "With eportfolios, we can see that they're synthesizing their knowledge," says Mark Hofer of the College of William and Mary.

How Wikispaces Private Label helps you support eportfolios

Use familiar tools

Because your Private Label site is accessible from any Internet browser, students and reviewers alike can access the eportfolios without installing any special software. And our visual editor is as easy to use as any word processor: **no HTML required**.

Give real-time feedback

Wikispaces Private Label lets you watch portfolios as they develop. Teachers, parents, and even other students can provide constructive feedback with tools like **comments** and **discussions**. This collaborative approach can help mold a deeper final product.

Provide your own technology platform

When you save students and teachers the trouble of looking for the right eportfolio platform, you encourage **adoption** and give them **more time** to curate great projects. Plus, with Wikispaces Private Label, you can **integrate with your existing systems** and provide the extra privacy and security your students need.

Build a life-long resource

ePortfolios on Wikispaces Private Label can follow students from grade to grade, growing as they grow. And when students graduate, we can **export their wikis** from your Private Label site to wikispaces.com. That way, former students can keep adding to the record of their experience as long as they like.

Provide tried-and-true templates

Wikispaces Private Label's wiki templates save set-up time when students create their portfolios. And **consistent formatting** can be a real boon when it's time for assessment.

Take advantage of pricing that fits

Wikispaces Private Label for K–12 starts at \$1,000 per year for 100 users. For larger institutions, the cost per user is significantly less.

You can get an exact price on the [pricing page](#). Feel free to [discuss your needs](#) with us.
